

getInvestmentAdvice() – too long to screenshot

Hi there investor! How are you today? Good? Haha probably not after you get a load of this stock data!:) M'kay so let's dive in! Here we can see that you're doing pretty swell with your best growing stock being Netflix grew by 59.83963558242771%! Okay good for you! That's pretty great kiddo, but 8 years ago, I invested in BitCoin, so who's the real winner here? Let's move on to your worst stock... seems to be Coke grew by 19.788535667031763%. Oof. I mean, it could be worse, but it's not good per say.

Moving on... let's see if your you're still lucky when it comes to your other stocks. Okay, okay, so it looks like you have been pretty subpar... You're stocks aren't too special, percent growth wise. Man, I'd hate to be as mediocre as you... must be rough.

You're stocks have been pretty okay so far... lets look at your stock prices when compared to some bollinger bands (cool stuff, I know)! Let's see here..... yeah okay..... It seems like your moving average is a bit higher than your higher bollinger band toward the end of the 6 month period! That means that your prices are being overbought... consider selling them before there is a large dip in stock price!

Well, this statement has been pretty lengthy and potentially a bit confusing to get through, especially if you aren't as stock savvy as I am. Okay, that's all I hope that helped! Have a stellar day.
